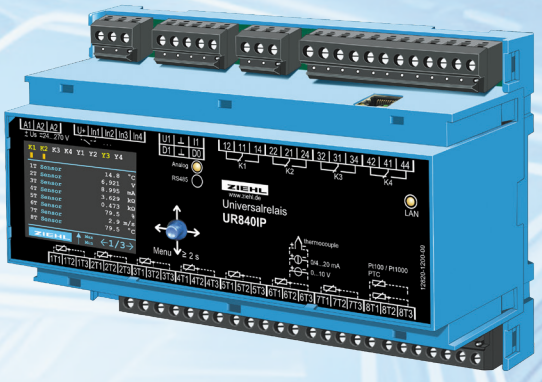
ZIEHL

UR-SERIES
Set a Limit to Temperatures

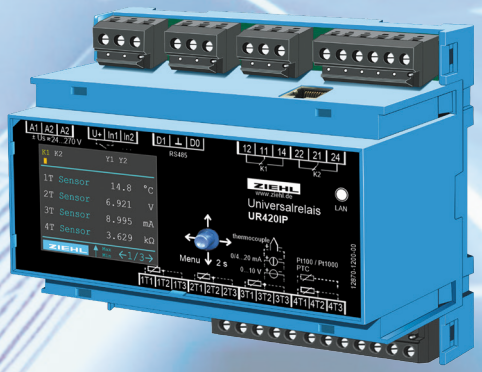
Monitoring and evaluating limit values for temperatures and analog signals is now much easier and more efficient thanks to the new UR series. With the integrated web browser, a wide variety of applications can be programmed in a matter of minutes. Up to eight inputs are available. Use four additional output relays (changeover contacts) with the URB40 relay box. Integration into existing systems and evaluation is easy thanks to the RS485 interface with Modbus RTU.



Type UR840IP

Part number: T224353

- ***8 Universal inputs*** Pt 100/1000, thermocouples, DC 0/2-10 V, DC 0/4-20 mA, resistance 0-30 kΩ
- ***4 Relay outputs, expandable to up to 8 outputs***
- ***2 Analog outputs, parameterizable (optional instead of RS485)***



Type UR420IP

Part number: T224354

- ***4 Universal inputs*** Pt 100/1000, thermocouples, DC 0/2-10 V, DC 0/4-20 mA, resistance 0-30 k kΩ
- ***2 Relay outputs, expandable to up to 6 outputs***

Extension for universal relay Type URB40

Part number: T224356

- ***4 additional outputs for UR840IP / UR420IP***
- Operation and control via RS485 (Modbus RTU) interface, also for third-party devices
- Space-saving installation
